UNIFIEE

Unifiee Prototype Audit

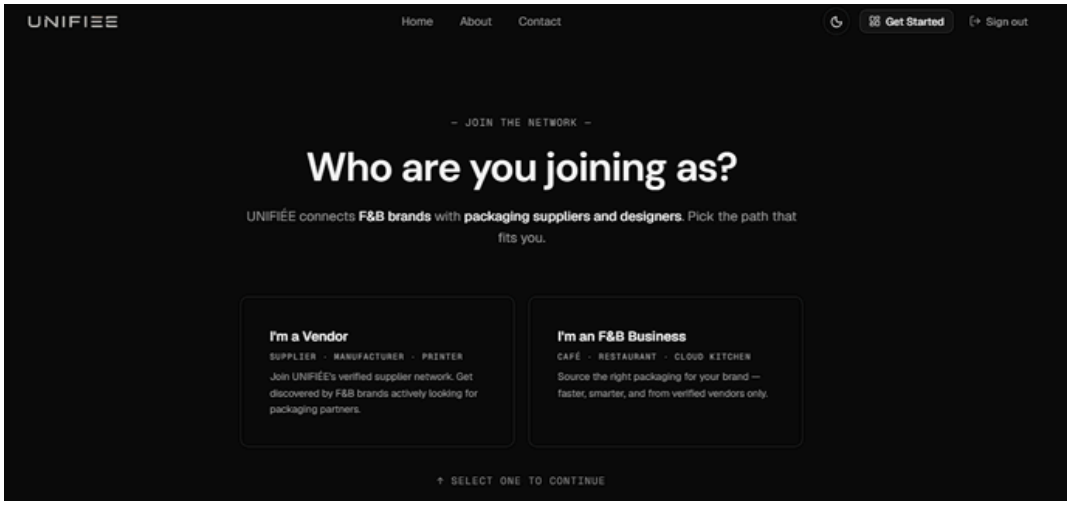

V2.0

03-10-2026

text

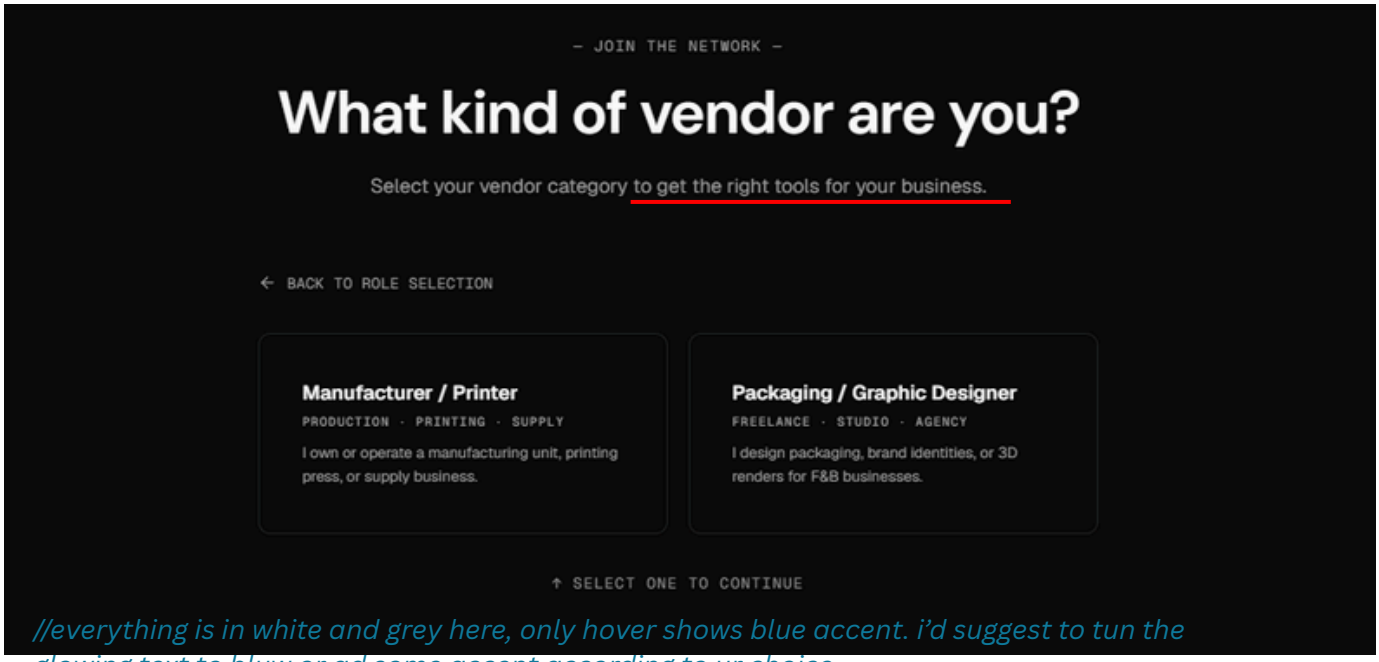

-Vaibhav Raj

1.

No poblem noticed looks clean, minimal and functional.

2. The Vendor Reg Page

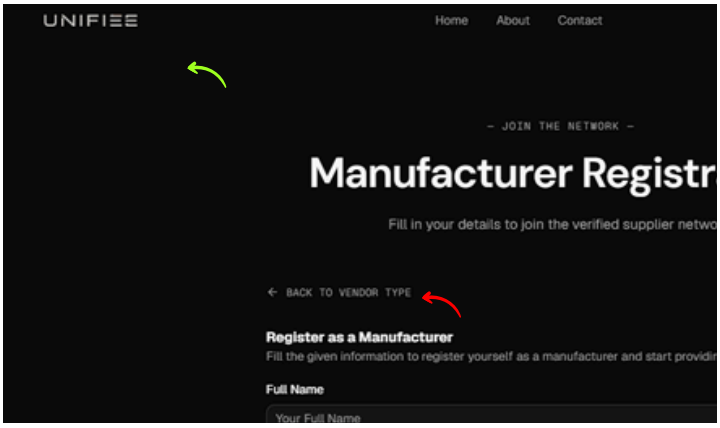

//everything is in white and grey here, only hover shows blue accent. i'd suggest to tun the glowing text to bluw or ad some accent according to ur choice.

- Select your vendor category to get to set up your profile according to your role.

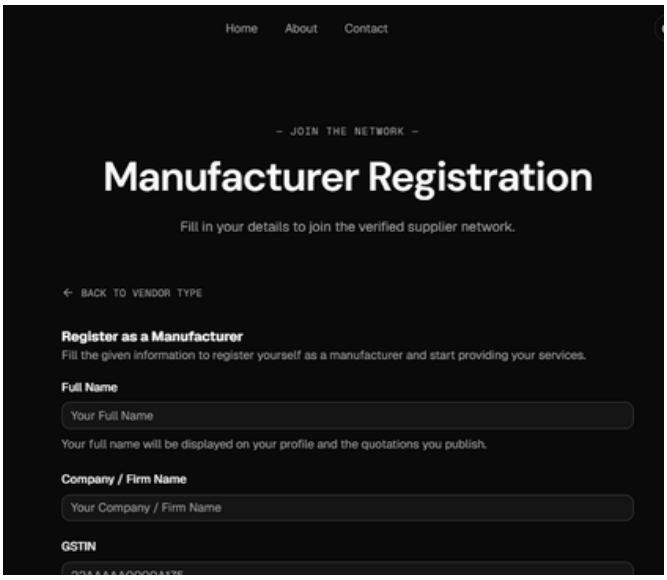

Something like this cuz tool doesn't suit here efficiently

2.1 Manufacturer regist.

// what do you think about this go back button being near top menu an side pannel cuz its a but unconvinent and ***unnoticable where its place now.***

//looks like another text description in there, you can even change colour of 'back' *to blue if its hard to repostion but repositioningh is preffered.*

- Manufact. form feilds audit.

1. Product / Packaging Categories — Essential
Instead of only:

> Services Offered → Flexo Printing, Corrugation

Have something like:

Packaging Categories

- Paper Cups
- Food Boxes
- Paper Bags
- Corrugated Boxes
- Stickers / Labels
- Cutlery
- Other

This is more useful for matching an F&B buyer to a supplier.

keep it select type

2. Manufacturing / Service Capabilities — Essential
Example:

Capabilities

- Flexographic Printing
- Offset Printing
- Digital Printing
- Corrugation
- Die Cutting
- Lamination
- Custom Printing
- etc.

This separates **what they make** from **how they make it.**

keep it select type

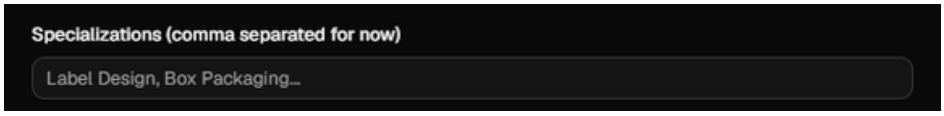

//on manufacturer side it should be clear that customised printing is mandatory! add a notice about that

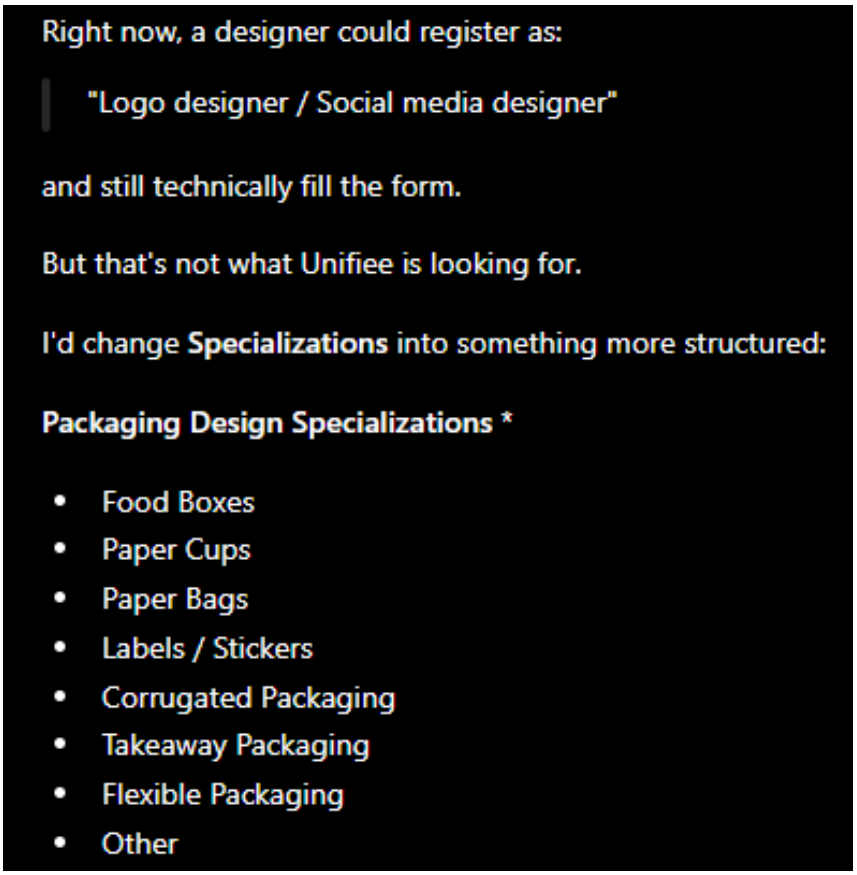

// eliminate the term quotation and replace with reliable words relate to ‘order’

// the offer word if used, will be help full as if manuactues want he can ceate iscounts an custom offers further.

keep it select type

2.2 the designer registration page.

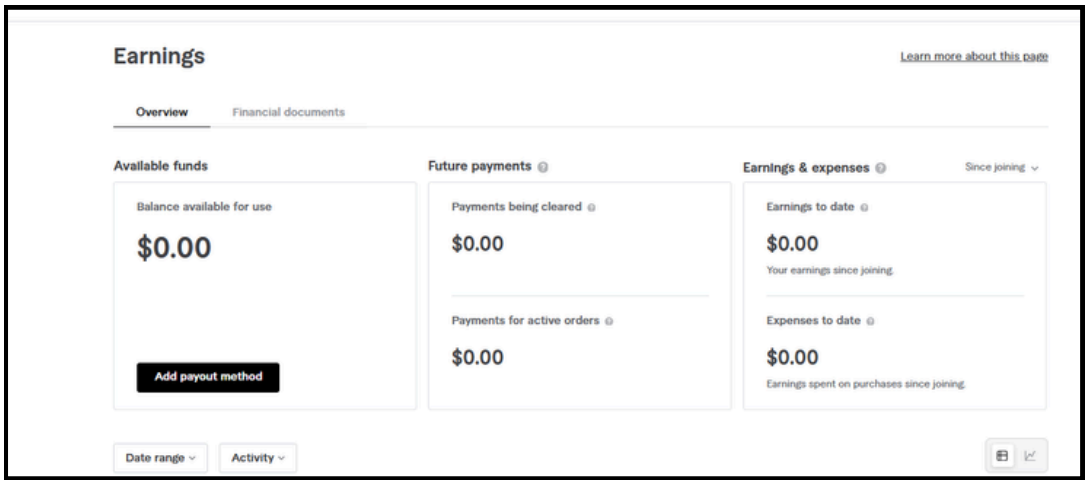

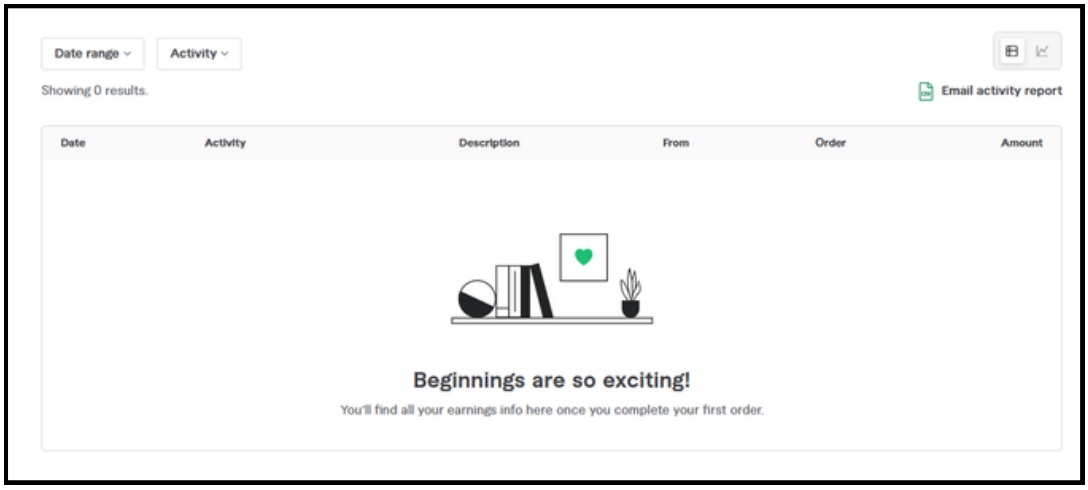

//change this feild to select type and implement these changes

- *”add a feild to ask average time to deliver*

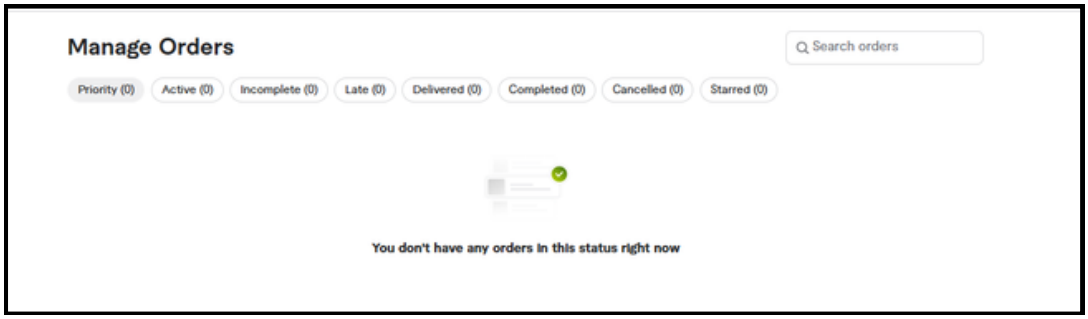

Am adding a few screenshots of fiverr as seller to take inspiration

// Earnings Dashboard

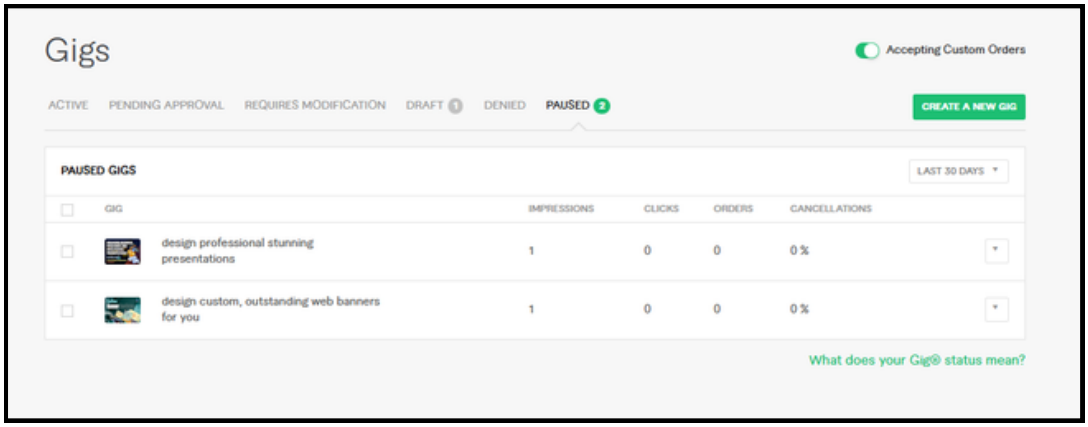

// Order Dashboard

// Offer Dashboard *interpret gigs as offers (quotations)*

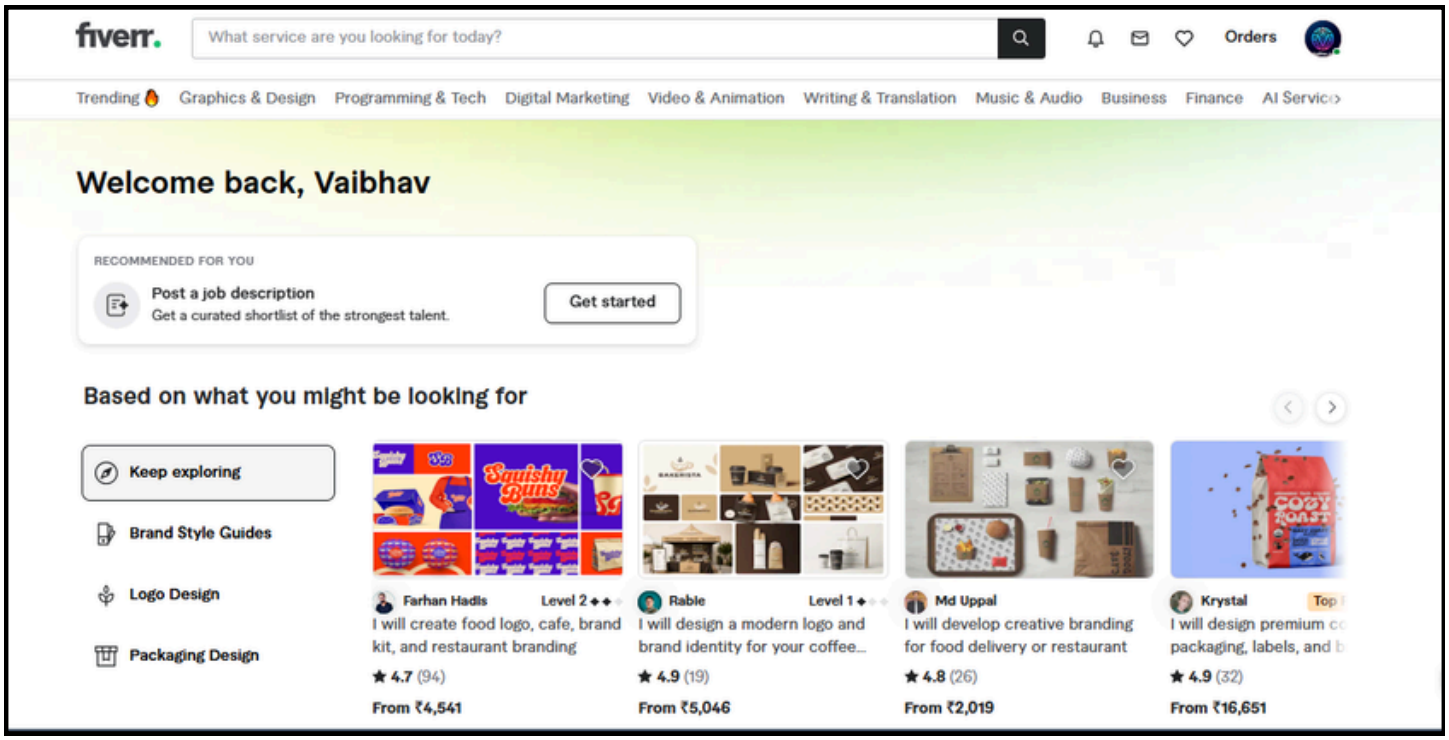

2. The Client Reg Page

//this looks cool no major changes need

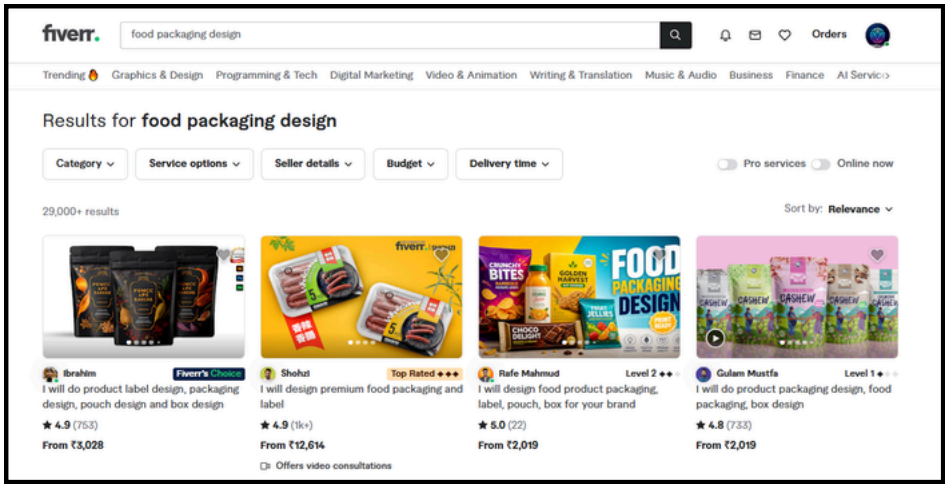

Am adding a few screenshots of fiverr as buyer to take inspiration

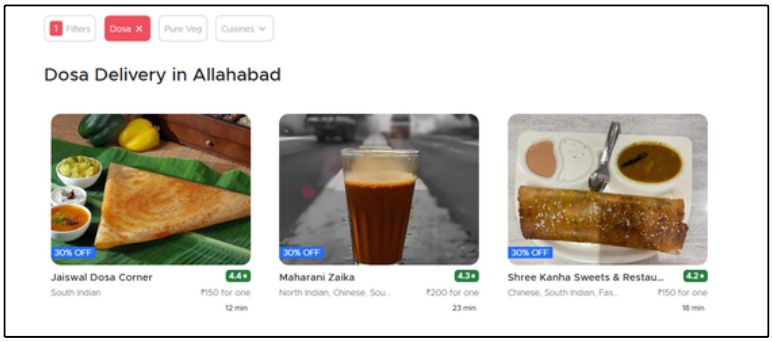

// Business Dashboard

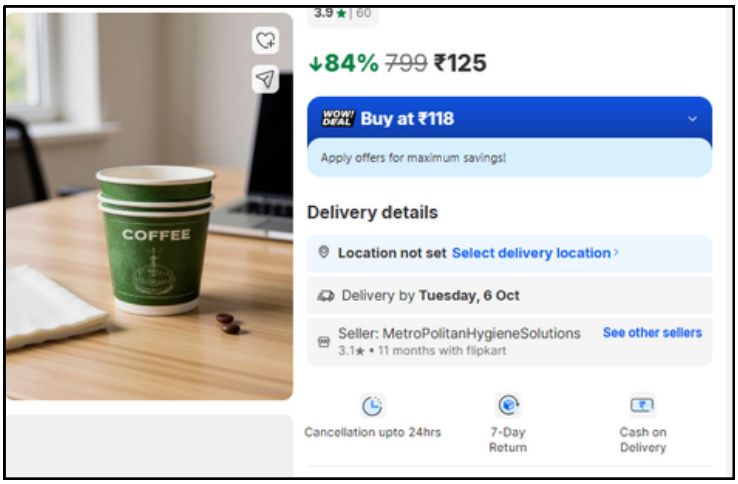

//recommended to take inspiation

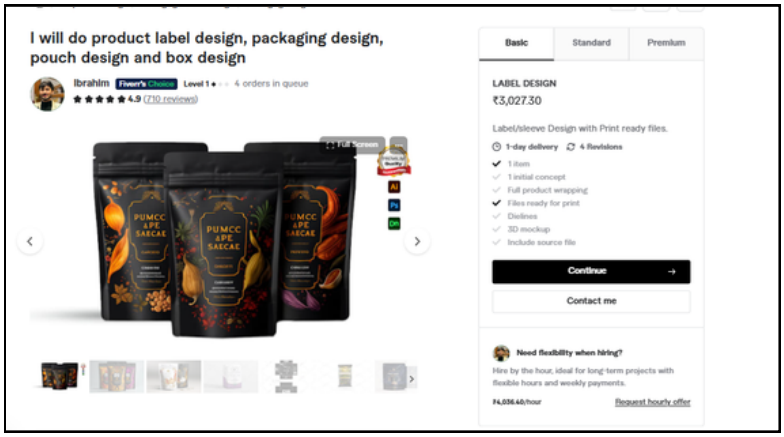

// Search

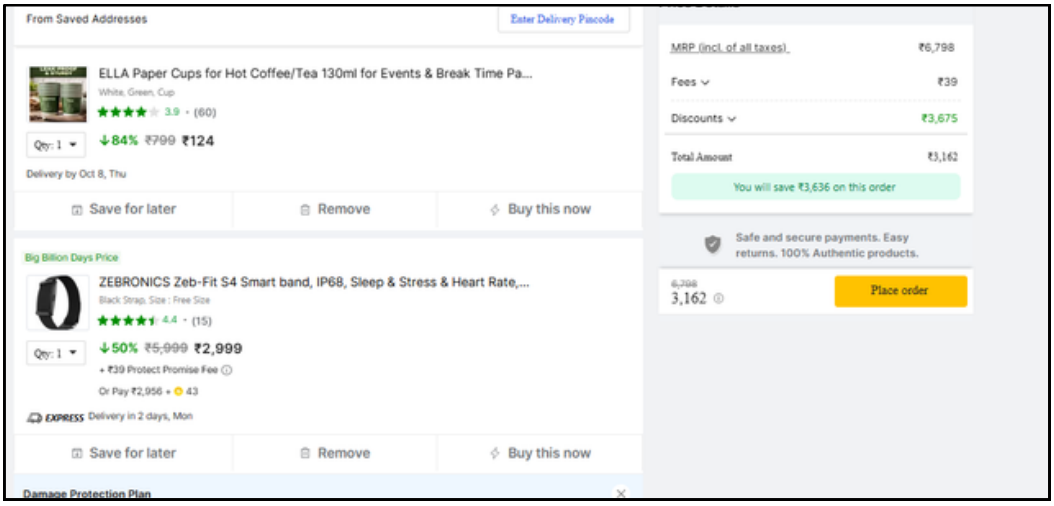

//offer view

//order lifecycle

also add favourite offers page in which the favourite quotsation of the client would be listed so they don't have to find the manufacturer every time
